EDUCATION

Informatics - Bachelor's Degree New Bulgarian University

09/2016 - Present

Sofia

Software Engineering Software University

09/2016 - 09/2018

Sofia

WORK EXPERIENCE

Fullstack Software Engineer BrainTech Ltd.

09/2022 - Present

Achievements/Tasks

- I'm on an ongoing rollercoaster journey as we develop ERP systems. This thrilling ride features a dynamic technology stack, including .NET Core, EF Core, Dapper, SQL, JS, React, Angular, DevExtreme & ServiceNow. This experience allows me to continually adapt and deliver top-quality results in the ever-evolving ERP landscape, looking only forward!

FullStack Software Engineer Bet365

03/2022 - 09/2022

Sofia, Bulgaria

Achievements/Tasks

- I navigated a challenging transition from backend to frontend. This rollercoaster journey of shifting technologies became my favorite thrill, highlighting my adaptability and passion for end-to-end solutions in software engineering

Software Developer Sensata Technologies

12/2020 - 02/2022

Sofia, Bulgaria

Achievements/Tasks

- Developing internal applications using ASP.NET Core, REST APIs, jQuery, HTML/CSS, and Bootstrap. This marked the starting point of my rollercoaster ride through the entire software development lifecycle.

Intern Software Developer U.S. Department of State

04/2018 - 12/2018

Sofia, Bulgaria

Developing internal software solutions.

Achievements/Tasks

- Developed Management Control System with ASP.NET MVC and EF ORM, complemented by a responsive front-end dynamic JavaScript components. It was here that my passion for software engineering took off.

PERSONAL PROJECTS

EVOGYM (09/2023 - 10/2023)

- EVOGYM is a React-based website designed to help users discover their ideal workout routines. With dynamic Framer Motion animations and the visual appeal of Heroicons, it offers a user-friendly and engaging platform for fitness enthusiasts of all levels.

Reactivities (09/2022 - 12/2022)

- Reactivities is a dynamic application built on .Net 7, React, MobX, EF Core, SQL and implements the CQRS & Mediator pattern. The app revolves around creating events, coordinating group activities, and facilitating connections with new people. Users can engage in real-time communication through a chat system powered by SignalR.

Dating Pets (11/2021 - 03/2022)

- This project, developed using .Net and Angular, is like Tinder but for pets. It simplifies the process of finding pets of the same breed and offers a one-stop solution for all your pet needs, including vet appointments and online food ordering. This promising venture is still in development and holds startup potential.

Meow2.0 - Softuniada (02/2019 - 04/2019)

- I made the application global, and we want to add something like Tinder's matching functions. The idea is to match all common animals and then the users will be available to chat each other.

CERTIFICATES

Technical Lead - Certificate (09/2023 - Present)

React & TypeScript - The Practical Guide (10/2023 - Present)

Building an application with .Net Core 7 and React 18 (12/2022 - Present)
